

Should direct mesocolon invasion be included in T4 for the staging of gastric ca

Answer (EN)

The paper does not state explicitly whether direct mesocolon invasion should be included in T4 staging of gastric cancer. It reports that the mesocolon is one of the most frequently invaded sites, notes that the UICC does not mention this site as an adjacent structure, and states that the study' s purpose was to "characterize and classify mesocolon invasion." The excerpt gives the study' s rationale but no concrete staging recommendation.

中文速览

文献摘要仅指出：结肠系膜是胃癌常见侵犯部位，且 UICC 未将其列为胃癌的邻近结构；该研究目的是“描述并对结肠系膜侵犯进行分类”。摘要并未明确提出应将其纳入 T4 分期的结论。

Source evidence

"One of the sites most frequently invaded by gastric cancer is the mesocolon; however, the UICC does not mention this anatomical site as an adjacent structure involved in gastric cancer. The purpose of this study was to characterize and classify mesocolon invasion from gastric cancer."

Final decision: maybe
