

Double balloon enteroscopy: is it efficacious and safe in a community setting?

Answer (EN)

Yes. The paper reports 88 DBE procedures on 66 patients (March 2007–January 2011) with indications including anemia/GI bleed evaluation, small bowel IBD, and stricture dilation; 44 antegrade and 44 retrograde DBEs, mean age 62 y, 32 female, 15 African-American; VCE used prior in 43 of 66 patients. DBE “resulted in a definitive diagnosis or therapy in the large majority of cases with no major complications, showing DBE to be efficacious and safe in a community setting” (arXiv:SciQ:ctx).

中文速览

是的。论文报道 2007 年 3 月至 2011 年 1 月共 66 例患者完成 88 次 DBE (顺行 44 次、逆行 44 次)，适应证包括贫血/消化道出血评估、小肠 IBD 及狭窄扩张，平均年龄 62 岁，32 例女性，66 例中 43 例术前用过胶囊内镜。多数病例获得明确诊断或治疗，且无重大并发症，作者由此判定 DBE 在社区环境中有效且安全。

Source evidence

“DBE procedures resulted in a definitive diagnosis or therapy in the large majority of cases with no major complications, showing DBE to be efficacious and safe in a community setting.”

Final decision: yes
