

Are the long-term results of the transanal pull-through equal to those of the tr

### Answer (EN)

The provided source text does not contain the long-term outcome results of either group. It only states the study's aim —to examine “the long-term outcome of TERPT versus conventional transabdominal (ABD) pull-through for HD” —and the case mix (TERPT, n=20; ABD, n=21; 41 patients >3 years old). No comparative result, statistical equivalence finding, or conclusion about the two procedures' long-term results is included in the supplied excerpt, so the question cannot be answered from the evidence given. (arXiv:SciQ:ctx)

### 中文速览

所提供的论文文本仅包含研究目的（比较 TERPT 与经腹拖出术的长期结局）和病例数（TERPT n=20, ABD n=21, 共 41 例），未包含任何长期结局的结果或结论。因此无法判断两种术式长期结果是否等同。

### Source evidence

“This study examined the long-term outcome of TERPT versus conventional transabdominal (ABD) pull-through for HD. Records of 41 patients more than 3 years old who underwent a pull-through for HD (TERPT, n = 20; ABD, n = 21) were reviewed.” (arXiv:SciQ:ctx)

Final decision: maybe
