

Do mitochondria play a role in remodelling lace plant leaves during programmed c

Answer (EN)

No. The source paper does not state that mitochondria play a role in remodelling lace plant (*Aponogeton madagascariensis*) leaves during programmed cell death (PCD). It describes the PCD process (cells at the centre of areoles die, stopping about five cells from the vasculature), but explicitly notes that while mitochondria's role in PCD is recognized in animals, it has been less studied in plants. It makes no claim about mitochondria driving leaf remodelling in the lace plant. (arXiv:SciQ:ctx)

中文速览

不能确认。原文描述了网脉草叶片通过程序性细胞死亡 (PCD) 形成穿孔的机制，但明确指出：线粒体在 PCD 中的作用已在动物中被认识，而在植物 PCD 中研究较少。文中并无任何关于线粒体参与网脉草叶片重构的论断。(arXiv:SciQ:ctx)

Source evidence

"The role of mitochondria during PCD has been recognized in animals; however, it has been less studied during PCD in plants." (arXiv:SciQ:ctx)
