

Landolt C and snellen e acuity: differences in strabismus amblyopia?

Answer (EN)

The provided paper excerpt does **not** state any difference between Landolt C and Snellen E acuity in strabismus amblyopia. It only describes the study design: visual acuity measured with the Snellen E was compared to Landolt C acuity in 100 patients (age 8–90 years, median 60.5 years) with various eye disorders, among them 39 with amblyopia due to strabismus (arXiv:SciQ:ctx:21). No results, figures, or conclusions regarding landolt-c vs. snellen-e differences in the strabismus amblyopia subgroup are given in the excerpt. Any quantitative outcome would be invention.

中文速览

所给片段仅描述研究设计 (100 例患者、中位年龄 60.5 岁、其中 39 例斜视性弱视, 比较 Snellen E 与 Landolt C 视力), 未报告任何两组视力差异的结果或数据; 斜视性弱视中的差异结论无法据此得出。
