

Does HER2 immunoreactivity provide prognostic information in locally advanced ur

Answer (EN)

The provided source excerpt does not state the answer. The paper describes the study design —evaluating HER2 immunoreactivity by immunohistochemistry in 114 locally advanced urothelial carcinoma specimens from patients treated with surgery alone or adjuvant methotrexate, vinblastine, epirubicin, and cisplatin (M-VEC), and exploring the influence of pathological parameters and HER2 immunoreactivity on progression-free survival (PFS) —but it gives no result, hazard ratio, p-value, or conclusion about whether HER2 immunoreactivity provides prognostic information in patients receiving adjuvant M-VEC. Whether HER2 immunoreactivity is prognostic therefore cannot be confirmed from the excerpt alone.

中文速览

提供的论文摘要仅描述了研究设计（114 例局部进展期尿路上皮癌标本，评估 HER2 免疫反应性对无进展生存期的影响），但未给出任何结果或结论，因此无法据此确认 HER2 免疫反应性在 M-VEC 辅助化疗患者中的预后价值。

Source evidence

“The authors evaluated HER2 immunoreactivity using immunohistochemical staining and explored the influence of pathological parameters and HER2 immunoreactivity on progression-free survival (PFS).”

(No result or conclusion regarding HER2’ s prognostic value is present in the provided excerpt.)
